Experience

Snap Social Media - Contract Technologies: Python, Airflow, GCP (GCS, BigQuery, Looker Studio), Gemini	Senior Data Engineer Jul 2025 - Present
· Developed a fail-safe, auto-archiving ETL network using Airflow, Gemini, and BigQuery to automate KPI tracking for global chip factories, saving multiple FTEs in software engineering budget · Automated data validation and pipeline monitoring scripts in Python, cutting manual quality checks by 50% and reducing error resolution times across distributed teams by hours · Led junior engineers in building data warehouse environments (DWE) to automatically track Overall Equipment Effectiveness (OEE) for global machinery, enabling centralized, real-time targeted efficiency gains for the Spectacles portfolio	
Bar2Bar Hospitality & Fintech - Contract Technologies: Rust, PostgreSQL (NocoDB), Terraform, AWS, Docker	Founding AI Engineer Jan 2026 - Present
· Engineered an agentic development workflow that automates the translation of design user stories into production-ready features, utilizing Native Web Components and WASM to deliver a high-performance, React-lite architecture that accelerated the product iteration cycle · Architected a full-stack referral and loyalty ecosystem, bridging a high-concurrency Rust backend with a React/TypeScript mobile interface; engineered end-to-end transactional workflows to ensure sub-millisecond execution and total data integrity for multi-venue reward cycles · Developed and deployed a fully containerized cloud infrastructure on AWS ECS and Fargate via Terraform, implementing secure secret injection and a self-hosted NocoDB pipeline for internal data management · Led the migration to Tauri v2, enabling cross-platform mobile and desktop deployment from a single codebase while maintaining native system performance	
Flawless.ai VFX - Contract Technologies: Python, Pytest, Temporal.io, Terraform, Github Actions, AWS	Senior Python & Platforms Engineer Apr-Jun 2025
· Recreated release Pipelines to nearly eliminate disruptions, reducing time to release from days to hours. · Created solution in python to automate CI/CD test discovery, which not only enhances the quality of our tests but also slashes the time consumed by manual testing by 40%, thus effectively cutting unnecessary expenses and ensuring timely progression across projects · Seamlessly integrated Terraform, GitHub Actions, GCP, AWS ECS and Slack. Boosting efficiency by 25% while enabling deeper tech integrations that foster reduce incident response and repair by hours	
Lantern.ai Private Equity Technologies: Python, Azure Databricks, dbt, Docker, PostgreSQL	Senior Data Engineer Mar 2024 - Mar 2025
· Developed and maintained enterprise Python libraries and Databricks environments to ensure the seamless and robust integration of Lantern's core data pipelines · Engineered Docker and Unix shell utilities to enable on-demand rebuilding of localized data environments, streamlining the development experience and accelerating engineering workflows · Architected and managed complex data models within Azure Databricks, leveraging PostgreSQL and dbt to guarantee reproducible builds while establishing the team's cloud testing standards for data framework quality	
Spend Network Government Technology - Contract Technologies: Python (PySpark), SQL (Athena), AWS (Glue, QuickSight, Glacier), Docker	Senior Python Engineer Aug 2023 – Mar 2024
· Collaborated with the CTO to prioritize the product backlog, effectively communicating engineering trade-offs to business stakeholders to balance immediate deliverables with long-term architectural investments · Designed and implemented iterative features, ETL pipelines, and APIs using Python and AWS, enhancing system security and reliability while influencing cross-functional system architecture · Owned the full software development lifecycle (SDLC) from inception to deployment, independently managing requirements gathering, test-driven development, and operational infrastructure for all Business Intelligence Projects	

Pik-Pok Game Development - *Contract*

Technologies: Python (Pytest, Pandas, Celery), SQL, Docusaurus, AWS (Red-shift), Postgres

Senior Data Engineer

Nov 2022 - May 2023

- Worked with the Engineering Team to design ETL pipelines using Python and AWS, supporting new product integrations for Game Development, Player Testing, and Data Analysts into our core products. Designed APIs for internal business partners, ensuring authentication, versioning, and comprehensive documentation.
- Effectively communicated project constraints to other business sectors while collaborating with the entire development team to shape system architecture and feature design.
- Demonstrated proficiency in designing, testing, and deploying new features iteratively and continuously. Operated autonomously on projects from inception to completion, assuming full accountability for the code authored, adhering to the ethos of "you build it, you run it."

Westpac Banking and Financial Sector

Technologies: Python (FastAPI, Pandas, Pytest, SQLAlchemy), AWS (ECR, API Gateway), Hadoop, Spark, Postgres

Data Engineer

Jan 2020 - Nov 2023

- Created and deployed APIs for interconnected services, designed client and partner-facing APIs with a focus on authentication, versioning, and documentation, and developed ETL pipelines using Python and AWS services. Enhanced the availability of our Bank's AI services and effectively communicated trade-offs to various business sectors.
- Standardized, and documented GitOps practices in Westpac's AI department, saving hundreds of thousands in yearly refactoring costs and onboarding times.
- Used Spark to create a data mart factory for quality assurance, saving hundreds of man hours in data collection costs.

Heineken FMCG Beverages

Technologies: Python, SQL, Power BI, Javascript (NodeJs, VueJs), Progressive Web Applications, Microsoft Power Apps

Data and Digital Specialist

Jan 2019 - Dec 2019

- Led the execution of Heineken's data and digital strategy in Australia and New Zealand. Collaborated with multiple business stakeholders to define project requirements, establish project constraints, and manage progress, iteratively developing and delivering on project milestones.
- Established new business relationships with government, business, and academic communities, ensuring the delivery of innovations within Heineken's supply chain.
- Used PowerBI to create the data warehouses visualisation layer of Heineken NZ Supply Chain, reducing company FTEs by 3.0.

Assurity Consulting

Technologies: Selenium, Webdriver, Junit, Java, Maven, SQL, Oracle SQL, Jenkins, Cucumber, Groovy

Test Engineer

Jan 2016 - Jan 2018

- Worked with the Multiple Government departments on business transformation projects, facilitated integration with new partners, and improved the accessibility of government services. Bolstered the security and dependability of our government software while adeptly communicating trade-offs to various internal & external stakeholders.
- Collaborated with the entire project team shape system architecture and feature design, and ensured quality of new functionalities in a continual and iterative fashion.

Education & Awards

Waikato University

Graduate Diploma — Software Engineering

2018

Duke Of Edinburgh

Silver Award — Community Service

2010

International Software Testing Board

Foundation Level Certificate — Test Engineering

2016

Victoria University of Wellington

Bachelor Of Arts — Economics, English Literature

2015

Governor-General of New Zealand

NZ Young Achievers Award — Mahi Aroha

2010

NZ Speech & Drama Board

Teaching Diploma — Dramatic Arts - Distinction

2010
