Experience

Bar2Bar Hospitality & Fintech - <i>Contract</i> Technologies: Rust, PostgreSQL(NocoDB), Terraform, AWS, Docker	Founding AI Engineer Jan 2026 - Present
- Engineered an agentic development workflow that automates the translation of design user stories into production-ready features; utilized Native Web Components and WASM to deliver a high-performance, React-lite architecture that accelerates the product iteration cycle - Architected a full-stack referral and loyalty ecosystem, bridging a high-concurrency Rust backend with a React/TypeScript mobile interface; engineered end-to-end transactional workflows using to ensure sub-millisecond execution and total data integrity for multi-venue reward cycles, which allows for cross-platform mobile and desktop deployment from a single codebase while maintaining native system performance - Developed and deployed a fully containerized cloud infrastructure on AWS ECS, & Fargate via Terraform, implementing secure secret injection and a self-hosted NocoDB pipeline for internal data management - Led the migration to Tauri v2 enabling cross-platform mobile and desktop deployment from a single codebase while maintaining native system performance	
Snap Social Media - <i>Contract</i> Technologies: Python, Airflow, GCP(GCS, BigQuery, Looker Studio)	Senior Python Engineer Jul 2025 – Present
- Developed resilient Python-based ETL pipelines orchestrated with Airflow, centralising production data into BigQuery and shrinking reporting latency by 60%, unlocking near real-time visibility - Automated data validation and pipeline monitoring scripts in Python, cutting manual quality checks by 50% and reducing error resolution time across distributed teams by hours - Collaborated with international stakeholders across multiple timezones to align product innovation decisions, and stakeholder reporting by ensuring adoption of Looker Studio dashboards to accelerate cross-team prototyping	
Banger Summer Challenge Technologies: Python (FastAPI, OpenCV), Node.js, Docker, Terraform, AWS, PostgreSQL, Streamlit	Personal Project Mar 2026 - Present
- Engineered a real-time data ingestion pipeline using Python and OpenCV DNN to automate object detection from social communication streams, achieving 10000% cultural engagement in British Summer for Expat Australians and New Zealanders - Architected & Maintained a containerized full-stack platform (leveraging IAC principles) with a custom 'Linked Device' bridge to synchronize high-volume messaging data with a persistent analytical backend, completely cutting out manual processing - Developed an interactive dashboarding and provisioned competitive analytical featuring to inspire a comradeship and sportsmanship whilst attaining a collective mission	
Flawless.ai VFX - <i>Contract</i> Technologies: Python, Pytest, Temporal.io, Terraform, Github Actions, AWS	Senior Python Engineer Apr-Jun 2025
- Recreated release Pipelines to nearly eliminate disruptions, reducing time to release from days to hours. - Created solution in python to automate CI/CD test discovery, which not only enhances the quality of our tests but also slashes the time consumed by manual testing by 40%, thus effectively cutting unnecessary expenses and ensuring timely progression across projects - Seamlessly integrated Terraform, GitHub Actions, GCP, AWS ECS and Slack. Boosting efficiency by 25% while enabling deeper tech integrations that foster reduce incident response and repair by hours	
Lantern.ai Private Equity Technologies: Python, Docker, PostgreSQL, dbt, Databricks	Senior Data Engineer Mar 2024 - Mar 2025
- Developed and maintained Python Libraries and Databricks environments for seamless and robust integration of Lanterns data pipelines - Created Software with Unix shell & Docker to enable on-demand rebuilding of data environments on local machines, streamlining development experience a & workflows. - Maintained and developed complex layers of the main data application model with PostgreSQL, dbt & Azure Databricks ensuring reproducible, builds and designing a maintainable testing standard for data framework quality for the wider data engineering team.	

Spend Network Government Technology - *Contract*

Technologies: Python (Pytest, Pyspark, Pandas, smtp), SQL, AWS (Athena, Glue, Quicksight, Glacier, Code Build, IAM, ECR), Docker, Airflow

Senior Python Engineer

Aug 2023 - Mar 2024

- Collaborated with the CTO and wider business to prioritize backlog items, ensuring a balance between short-term deliverables and long-term technology investments, while effectively communicating trade-offs to other business areas.
- Designed and implemented continuous and iterative feature development, including ETL pipelines and APIs, leveraging Python and AWS services. Enhancing system security and reliability while collaborating across the development team to influence architecture and feature design.
- Independently managed projects from inception to deployment, taking ownership of requirements gathering, code quality, and operational responsibility.

Pik-Pok Game Development - *Contract*

Technologies: Python (Pytest, Pandas, Celery), SQL, Docusaurus, AWS (Redshift), Postgres

Senior Data Engineer

Nov 2022 - May 2023

- Worked with the Engineering Team to design ETL pipelines using Python and AWS, supporting new product integrations for Game Development, Player Testing, and Data Analysts into our core products. Designed APIs for internal business partners, ensuring authentication, versioning, and comprehensive documentation.
- Effectively communicated project constraints to other business sectors while collaborating with the entire development team to shape system architecture and feature design.
- Demonstrated proficiency in designing, testing, and deploying new features iteratively and continuously. Operated autonomously on projects from inception to completion, assuming full accountability for the code authored, adhering to the ethos of "you build it, you run it."

Westpac Banking and Financial Sector

Technologies: Python (FastAPI, Pandas, Pytest, Locust, SQLAlchemy, Poetry), AWS (ECR, API Gateway), Hadoop, Scala, Spark, Hive, Postgres, Informatica

Data Engineer

Jan 2020 - Nov 2023

- Created and deployed APIs for interconnected services, designed client and partner-facing APIs with a focus on authentication, versioning, and documentation, and developed ETL pipelines using Python and AWS services. Enhanced the availability of our Bank's AI services and effectively communicated trade-offs to various business sectors.
- Standardized, and documented GitOps practices in Westpac's AI department, saving hundreds of thousands in yearly refactoring costs and onboarding times. Used Spark to create a data mart factory for quality assurance, saving hundreds of man hours in data collection costs.

Heineken FMCG Beverages

Technologies: Python, SQL, Power BI, Javascript (NodeJs, VueJs), Progressive Web Applications, Microsoft Power Apps

Data and Digital Specialist

Jan 2019 - Dec 2019

- Led the execution of Heineken's data and digital strategy in Australia and New Zealand. Collaborated with multiple business stakeholders to define project requirements, establish project constraints, and manage progress, iteratively developing and delivering on project milestones.
- Established new business relationships with government, business, and academic communities, ensuring the delivery of innovations within Heineken's supply chain.
- Used PowerBI to create the data warehouses visualisation layer of Heineken NZ Supply Chain, reducing company FTEs by 3.0.

Education & Awards

Toi Ohomai Institute of Technology - Software Engineering

Grad Diploma - Dec 2018

Victoria University of Wellington - Economics, Min. English Lit.

Bachelor of Arts - Dec 2015

International Software Testing Board - Test Engineering

ISTQB Foundation Level - Mar 2016

NZ Speech & Drama Board - Drama Teaching

Diploma - Dec 2010
